The Asbestos Charter

Aims: Justice For The Victims And A Global Ban

Case

- 1) That the indestructible fibres known as asbestos are highly hazardous to humanity and asbestos induced cancers are now at pandemic levels across the world.
- 2) That in many countries the victims of these insidious superinfections are not receiving adequate diagnosis and thus are being denied vital medical treatment.
- 3) That further the victims and their families are not receiving due entitlement to state welfare and sickness benefits because of this lack of diagnosis.

Conclusion

- 1) That this essentially is a fundamental breach of human rights and an affront to common decency and humanity.
- 2) That any deliberate denial of diagnosis is contrary to the pure principals of universal medical ethics.
- 3) That any state promoting a policy to produce fatal asbestos products while denying the dangers, or failing to adequately diagnose or treat victims, is acting oppressively.

Proposition

That there be a Universal Declaration by all states to ban asbestos and implement an ethical Code of Practice for the diagnosis and treatment of terminal victims, and so that the asbestos holocaust can be halted in the interests of global humanity.
